

Borehole

10-01-28**Log Event A****Borehole Information**

Farm : <u>A</u>	Tank : <u>A-101</u>	Site Number : <u>299-E25-204</u>
N-Coord : <u>41,187</u>	W-Coord : <u>47,768</u>	TOC Elevation : <u>690</u>
Water Level, ft :	Date Drilled : <u>1/31/84</u>	

Casing Record

Type : <u>Steel-welded</u>	Thickness, in. : <u>0.280</u>	ID, in. : <u>6</u>
Top Depth, ft. : <u>0</u>	Bottom Depth, ft. : <u>45</u>	

Borehole Notes:

A driller's log was not available for this borehole. According to Welty (1988) and Chamness and Merz (1993), this borehole was installed in 1984 to a depth of 45 ft. There is no mention that the casing was perforated. Chamness and Merz (1993) report that the borehole was grouted, but no details are provided of the grouted intervals.

The casing thickness for the borehole is assumed to be 0.280 in., on the basis of the published thickness for schedule-40, 6-in. casing.

The top of the casing is the zero reference for the log. The casing lip is approximately even with the ground surface.

Equipment Information

Logging System : <u>2</u>	Detector Type : <u>HPGe</u>	Detector Efficiency: <u>35.0 %</u>
Calibration Date : <u>10/1996</u>	Calibration Reference : <u>GJO-HAN-13</u>	Logging Procedure : <u>P-GJPO-1783</u>

Logging Information

Log Run Number : <u>1</u>	Log Run Date : <u>11/27/1996</u>	Logging Engineer: <u>Bob Spatz</u>
Start Depth, ft.: <u>0.0</u>	Counting Time, sec.: <u>100</u>	L/R : <u>L</u> Shield : <u>N</u>
Finish Depth, ft. : <u>27.5</u>	MSA Interval, ft. : <u>0.5</u>	Log Speed, ft/min.: <u>n/a</u>

Log Run Number : <u>2</u>	Log Run Date : <u>11/27/1996</u>	Logging Engineer: <u>Bob Spatz</u>
Start Depth, ft.: <u>26.5</u>	Counting Time, sec.: <u>100</u>	L/R : <u>R</u> Shield : <u>N</u>
Finish Depth, ft. : <u>36.0</u>	MSA Interval, ft. : <u>0.5</u>	Log Speed, ft/min.: <u>n/a</u>

Borehole

10-01-28**Log Event A**

Log Run Number :	<u>3</u>	Log Run Date :	<u>11/27/1996</u>	Logging Engineer:	<u>Bob Spatz</u>
Start Depth, ft.:	<u>35.0</u>	Counting Time, sec.:	<u>100</u>	L/R : <u>L</u>	Shield : <u>N</u>
Finish Depth, ft. :	<u>43.5</u>	MSA Interval, ft. :	<u>0.5</u>	Log Speed, ft/min.:	<u>n/a</u>

Logging Operation Notes:

This borehole was logged in three log runs. The total logging depth achieved by the SGLS was 43.5 ft. Log run two was acquired using real time parameters because of the excessive dead time.

Analysis Information

Analyst : S.D. BarryData Processing Reference : MAC-VZCP 1.7.9Analysis Date : 02/10/1998**Analysis Notes :**

The pre- and post-survey field verification spectra for all logging runs met the acceptance criteria established for peak shape and system efficiency. The energy calibration and peak-shape calibration from these spectra were used to establish the peak resolution and channel-to-energy parameters used in processing the spectra acquired during the logging operation.

Casing correction factors for a 0.280-in.-thick steel casing were applied during analysis.

Log Plot Notes:

Separate log plots show the man-made and the naturally occurring radionuclides. The natural radionuclides can be used for lithology interpretations. The headings of the plots identify the specific gamma rays used to calculate the concentrations. Uncertainty bars on the plots show the statistical uncertainties for the measurements as 95-percent confidence intervals. Open circles on the plots give the MDL. The MDL of a radionuclide represents the lowest concentration at which positive identification of a gamma-ray peak is statistically defensible.

A combination plot includes the man-made and natural radionuclides, the total gamma derived from the spectral data, and the Tank Farms gross gamma log. The gross gamma plot displays the latest available digital data. No attempt has been made to adjust the depths of the gross gamma logs to coincide with the SGLS data.

Plots of the shape factor analysis results are included. These plots are used as an interpretive tool to help determine the radial distribution of man-made contaminants around the borehole.

A time-sequence plot of the historical gross gamma logs from 1984 to 1993 is also included with the SGLS log plots.

Results/Interpretations:

The man-made radionuclides Cs-137, Co-60, and Eu-154 were detected around this borehole. Cs-137 contamination was detected nearly continuously from the ground surface to the bottom of the logged interval (43.5 ft). Co-60 contamination was detected from the ground surface to 6.5 ft and 11 ft to the bottom of the

Log Event A

logged interval. Eu-154 contamination was detected from a depth of 21.5 to 42 ft.

An analysis of the shape factors associated with applicable segments of the spectra was performed. The shape factors did not provide insights into the distribution of the Cs-137 and Co-60 contamination or into the nature of zones of elevated total count gamma-ray activity not attributable to gamma-emitting radionuclides because of the presence of grout.

Additional information and interpretations of log data are included in the main body of the Tank Summary Data Report for tank A-101.
